## Experiment 7

**Student Name: Rohan Kumar Shah**

**Branch: CSE**

**Semester: 6<sup>th</sup>**

**Subject: Java**

**UID: 22BCS11018**

**Section: IOT-642 -B**

**DOP: 17/03/025**

**Subject Code:22CSH-359**

### Problem - 7.1

#### **Aim:**

1. Setup MySQL Database

- Ensure MySQL is installed and running.
- Create a database and an `Employee` table with columns `EmpID`, `Name`, and `Salary`.

2. Update Database Credentials

- Replace `your\_database`, `your\_username`, and `your\_password` in the code with actual database credentials.

3. Add MySQL JDBC Driver

- Download and add `mysql-connector-java.jar` to your project's classpath.

4. Compile and Run the Program

- Compile: `javac MySQLConnection.java`
- Run: `java MySQLConnection`

5. Verify Output

- Ensure that employee records are displayed correctly from the database.

#### **Code:**

```
import java.sql.*;
```

```
public class MySQLConnection
```

```
{
```

```
    public static void main(String[] args)
```

```
    {
```

```
        String url = "jdbc:mysql://localhost:3306/your_database";
```

```
        String user = "Aditya";
```

**DEPARTMENT OF**

**COMPUTER SCIENCE & ENGINEERING**

Discover. Learn. Empower.

```
String password = "123456";
Connection conn = null;
Statement stmt = null;
ResultSet rs = null;

try {

    Class.forName("com.mysql.cj.jdbc.Driver");
    conn = DriverManager.getConnection(url, user, password);
    System.out.println("Connected to the database successfully!");

    stmt = conn.createStatement();
    String query = "SELECT * FROM Employee";
    rs = stmt.executeQuery(query);

    System.out.println("EmpID | Name | Salary");
    while (rs.next()) {
        int id = rs.getInt("EmpID");
        String name = rs.getString("Name");
        double salary = rs.getDouble("Salary");
        System.out.println(id + " | " + name + " | " + salary);
    }
} catch (ClassNotFoundException e)
{ System.out.println("MySQL JDBC Driver not found!");
  e.printStackTrace();
} catch (SQLException e)
{ System.out.println("Database connection error!");
  e.printStackTrace();
} finally
{ try {
    if (rs != null) rs.close();
    if (stmt != null) stmt.close();
    if (conn != null) conn.close();
} catch (SQLException e)
{ e.printStackTrace();
}
}
}
```

## Output:

```
Connected to the database successfully!
EmpID | Name | Salary
1 | John Doe | 50000.00
2 | Jane Smith | 60000.00
```

## Problem - 7.2

**Aim :** Instructions to Run the Java CRUD Program

### 1. Setup MySQL Database

- Ensure MySQL is installed and running.
- Create a database and a 'Product' table with columns 'ProductID', 'ProductName', 'Price', and 'Quantity'

### 2. Update Database Credentials

- Replace 'your\_database', 'your\_username', and 'your\_password' in the code with actual database credentials

### 3. Add MySQL JDBC Driver

- Download and add 'mysql-connector-java.jar' to your project's classpath.

### 4. Compile and Run the Progra

- Compile: 'javac ProductCRUD.java'
- Run: 'java ProductCRUD'

### 5. Menu-Driven Operations

- Select options to \*\*Create\*\*, \*\*Read\*\*, \*\*Update\*\*, or \*\*Delete\*\* products.
- Input values as prompted.

### 6. Transaction Handling

- Transactions ensure data integrity.
- If an error occurs, changes are rolled back.

## 7. Verify Output

- Ensure product records are correctly manipulated in the database.

## Code :

```
import java.sql.*;

import java.util.Scanner

public class ProductCRUD {

    private static final String URL = "jdbc:mysql://localhost:3306/your_database";

    private static final String USER = "Aditya";

    private static final String PASSWORD = "123456";

    public static void main(String[] args) {

        try (Connection conn = DriverManager.getConnection(URL, USER, PASSWORD);

            Scanner scanner = new Scanner(System.in))

        { Class.forName("com.mysql.cj.jdbc.Driver")

        while (true) {

            System.out.println("\nProduct Management System");

            System.out.println("1. Add Product");

            System.out.println("2. View Products");

            System.out.println("3. Update Product");

            System.out.println("4. Delete Product");

            System.out.println("5. Exit");

            System.out.print("Enter your choice: ");

            int choice = scanner.nextInt();

            switch (choice) {

                case 1: addProduct(conn, scanner); break;
```

```
        case 2: viewProducts(conn); break;

        case 3: updateProduct(conn, scanner); break;

        case 4: deleteProduct(conn, scanner); break;

        case 5: System.out.println("Exiting..."); return;

        default: System.out.println("Invalid choice, try again.");

    }

}

} catch (Exception e)

    { e.printStackTrace();

}

}
```

private static void addProduct(Connection conn, Scanner scanner) throws SQLException

```
{ System.out.print("Enter Product Name: ");

String name = scanner.next();

System.out.print("Enter Price: ");

double price = scanner.nextDouble();

System.out.print("Enter Quantity: ");

int quantity = scanner.nextInt();

String sql = "INSERT INTO Product (ProductName, Price, Quantity) VALUES (?, ?, ?)";

try (PreparedStatement pstmt = conn.prepareStatement(sql)) {

    pstmt.setString(1, name);

    pstmt.setDouble(2, price);

    pstmt.setInt(3, quantity);

    pstmt.executeUpdate();

    System.out.println("Product added successfully!");

}
```

**Output :**

```
Product Management System
1. Add Product
2. View Products
3. Update Product
4. Delete Product
5. Exit
Enter your choice: 1
Enter Product Name: Laptop
Enter Price: 50000
Enter Quantity: 10
Product added successfully!
```
